

ENGLISH

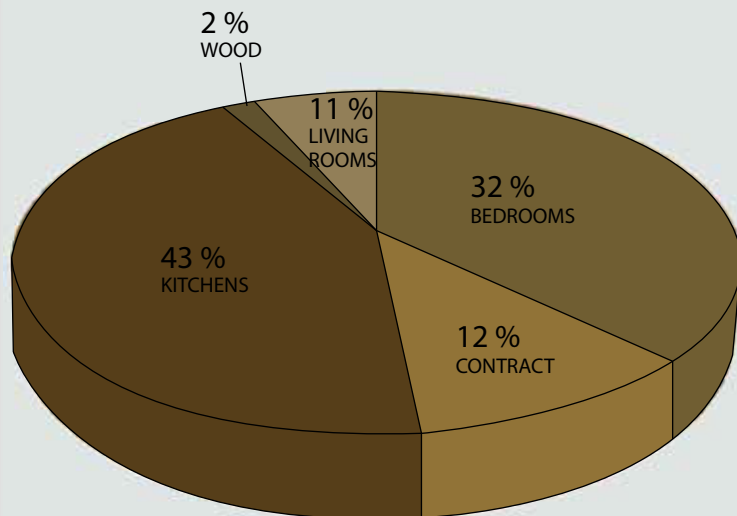

- Number of factory units: 4
- Covered floor area: 30,000 sqm
- Advanced production lines

From the processing of the panel to the finished product ready to be used, here are the five phases of ARES production cycle:

- CUTTING: Cutting to measure and automated movement of the panels.
- SQUARING AND EDGE-BANDING: Squaring and edge-banding depending on the type of edges and of finishes.
- HOLE-DRILLING: Drilling of the panels necessary for assembly.
- ASSEMBLY: Assembly of semi-finished panels according to product and colour.
- DISPATCH: Dispatch of packages/products.

ARES has a trim commercial structure, its main strength being the sector experience and deep knowledge of the customer's needs.

The objective of ARES is to add value to its range of products, concentrating on the categories that permit greater large-scale savings and simultaneously to guarantee to the distributor the possibility to propose modular solutions to the final client.
